QuickQube

QuickQube is the first and only automated estimating tool designed exclusively for the commercial office and industrial moving industry. It will improve your productivity and help you build your business.

Who Needs QuickQube?

- **Commercial movers** - book more business

- **Household movers** – get into commercial moving

- **Facilities Managers** - handle your own move

- **Move Consultants** - be more valuable to your clients

Why Do **You** Need QuickQube?

- **Increased Productivity:** Book more business in less time

    - Cuts down on travel time –you can present your bid right after you do the job walk.

    - Takes less time to prepare estimates – the inventory is already in the computer.

    - Close more sales because you can present your proposal right after you finish the job walk

    - New sales people will get up to speed faster when they're using QuickQube.

    - Forget lost paperwork – everything's at your fingertips in QuickQube, from origin and destination access information to inventories of what's moving and what's not. All your notes there too, right with the inventory.

- **Eliminate Errors in Your Estimates:** QuickQube does the calculations for you - no more math errors that cost you money.

- **Supports All Standard Estimating Methods:** QuickQube does them all - whether you estimate by cubes, dolly loads, truck loads, weight, cost per item or time per item QuickQube will do it your way.

Our streamlined workspace and easy-to-use tabs make program features easier to find and use.

Get the Job Walk Done Quickly and Easily

- **The Job Walk Inventory screen is where you'll do your inventory. Just think of it as being a computerized version of your tally sheet or cube sheet.**

    With QuickQube you can create as many different types of tally sheets (we call them schemes) as you want, each with its own unique list of items. If you do a lot of moves for law firms you can have a predefined tally sheet that only includes the items you typically need for that kind of move. You can set up as many different schemes as you like - schools, libraries, medical offices, warehouses, you name it. If you're in the middle of a job walk and have to inventory an item that's not in your current scheme it's easy to add it on the fly from your master list. You can also clone an existing item and change its properties (e.g. if you come across an extra large desk) or you can create new items at anytime during the job walk.

QuickQube's intuitive interface makes the program easy to use.

QuickQube helps you remember access information about all the buildings you move clients in and out of. You won't forget that extra long push or other details that can affect the cost of the move.

QuickQube Calculates Estimates in a Flash

- **See the Current Move Cost Anytime.**

The Job Summary screen gives you a real-time look at what the move cost on demand. If you're half way through a big job walk and want to know where you're at so far the Job Summary screen will let you know. If you haven't had a chance to enter the all the particulars of the job (origin and destination access information, move type, truck type, etc.) the Job Summary screen will show you the current calculated cost based on your default settings. Typically, that might be ground floor to ground floor, no access issues, a shuttle move using tractor trailers. QuickQube uses whatever defaults you have configured.

- **QuickQube Is Always Up To Date.**

As you enter access adjustments, change truck types or manually adjust costs for any aspect of the move, the Job Summary screen automatically refreshes and calculates the move cost based on the most current data.

Leverage Your Best Salespeople's Expertise

QuickQube lets you set up access adjustments and other factors that affect estimate costs based on your own experience or the experience of your most knowledgeable sales rep. Once that "expert knowledge" is in the system it's available to everyone using the system.

Making sure you take into account all the access conditions at origin and destination is critical to being able to come up with the right pricing for a move. From long carries to stairs and elevator transfers we've got you covered. When you set up QuickQube you enter factors that tell QuickQube how much you normally adjust for many common access issues (e.g, for every flight of stairs add 10% to the estimated move cost). If you gather more access information and enter it during the job walk QuickQube will instantly adjust its pricing calculations accordingly.
